L.COM

L.COM

Land Based Communication &

Configuration Management Software

Our L.COM Software is a local counterpart to our R.COM module.

By the product L.COM develogic provides configuration services for all our instruments local or remote. It furthermore submits logging the received remote data to forward the data to a selected sensor manufacturers' data management software.*

L.COM communicates with remote sites either via directly interfaced transponders or, in case of IRIDIUM Short Burst data services, by interfacing to your e-mail server.

*Currently: AADI Realtime Data Collector Software

Product Specification

Screenshot L.COM software
