

SeaPROFILER

ADCP

Direct-Reading
300 kHz / 600 kHz / 1200 kHz

The Rowe Technologies **SeaPROFILER** product family of direct-reading Acoustic Doppler Current Profilers (ADCPs) represent the industry state of the art in acoustic Doppler technology. The compact form factor, powerful electronics and robust signal processing, provide a versatile platform capable of producing precise current profile measurements over extended ranges.

Each unit in the family leverage a core, common set of electronics in a flexible form factor. This combined with multiple packaging options [either horizontal or vertical electronics placement] provides for a cost-effective and extremely capable instrument to address a wide variety of oceanographic applications.

The **SeaPROFILER** ADCP's are well suited for real-time current profiling applications such as coastal monitoring, where a bottom-mounted or surface-deployed configuration is used with a hard-wired communications and power source. The ability for the **SeaPROFILER** to also track the bottom allows it to be used in moving boat applications as well.
